SHIPMENT

With a network of over 36,000 shipments a day, 28,000 vehicles and 78 hubs, JFM is able to deliver efficiently at competitive prices across Europe. JFM has developed a strong name in lightweight products and products with demanding sizes. This in combination with general cargo, groupage, LCL and FTL shipments. An additional advantage is that courier delivery is consuming a part of the services which allows for 2-4-2 delivery in Europe.

LEADTIME

The system works as a postal service, with daily departures to 42 countries and 214 European hubs. JFM meets extremely fast leadtimes in every corner of Europe and allows for standard as well as express leadtimes.

SUSTAINABLE

Together with all European partners, JFM uses a hybrid model in which shipments are consolidated throughout Europe. This results in a high occupancy rate of trailers at loading but also a high drop density in distribution which creates a very efficient last mile and results therefore in low CO2 emission per shipment.

PERFORMANCE

The shipments run through certified systems with an internal control system and integrated risk management which results in a delivery performance of 99% of collected shipments. Express shipments delivery accuracy is above 99%. Furthermore, the systems are ISO 9001, ISO 14001, EN15266 and HACCP certified.

DIGITAL PROCESS

All the processes in the network are integrated with each other and exchange central data, status information and obligating track and trace of shipments anywhere in Europe. This data is linked to JFM's portal and provides you with up-to-date information.
